CONCUSSION RECOGNITION TOOL 5[®]

To help identify concussion in children, adolescents and adults

RECOGNISE & REMOVE

Head impacts can be associated with serious and potentially fatal brain injuries. The Concussion Recognition Tool 5 (CRT5) is to be used for the identification of suspected concussion. It is not designed to diagnose concussion.

STEP 1: RED FLAGS - CALL AN AMBULANCE

If there is concern after an injury including whether ANY of the following signs are observed or complaints are reported then the player should be safely and immediately removed from play/game/activity. If no licensed healthcare professional is available, call an ambulance for urgent medical assessment:

 Neck pain or t Double vision Weakness or t burning in arm 	ingling/	 Severe or increasin headache Seizure or convuls Loss of consciousing 	ion •	Deteriorating conscious state Vomiting Increasingly restless, agitated or combative
Remember:	of first aid	es, the basic principles J (danger, response, eathing, circulation)	(othe	ot attempt to move the player er than required for airway port) unless trained to so do.

 Assessment for a spinal cord injury is critical.
 Do not remove a helmet or any other equipment unless trained to do so safely.

If there are no Red Flags, identification of possible concussion should proceed to the following steps:

STEP 2: OBSERVABLE SIGNS

Visual clues that suggest possible concussion include:

should be followed.

- Lying motionless on the playing surface
- Slow to get up after a direct or indirect hit to the head
- Disorientation or confusion, or an inability to respond appropriately to questions
- Balance, gait difficulties, motor incoordination, stumbling, slow laboured movements
 - Facial injury after head trauma

Blank or vacant look

STEP 3: SYMPTOMS

 Headache Difficulty Blurred vision More emotional . concentrating "Pressure in head" Sensitivity to light More Irritable • Difficulty Balance problems Sensitivity Sadness . remembering to noise Nausea or Nervous or Feeling slowed vomiting Fatigue or anxious down low energy Drowsiness Neck Pain • Feeling like "Don't feel right" "in a fog" Dizziness

STEP 4: MEMORY ASSESSMENT

(IN ATHLETES OLDER THAN 12 YEARS)

Failure to answer any of these questions (modified	•	"What venue are we at today?"	•	"What team did you play last week/game?"
appropriately for each sport) correctly may	•	"Which half is it now?"	•	"Did your team win the last game?"
suggest a concussion:	•	"Who scored last in this game?"		the last game.

Athletes with suspected concussion should:

- Not be left alone initially (at least for the first 1-2 hours).
- · Not drink alcohol.
- · Not use recreational/ prescription drugs.
- · Not be sent home by themselves. They need to be with a responsible adult.
- · Not drive a motor vehicle until cleared to do so by a healthcare professional.

The CRT5 may be freely copied in its current form for distribution to individuals, teams, groups and organisations. Any revision and any reproduction in a digital form requires approval by the Concussion in Sport Group. It should not be altered in any way, rebranded or sold for commercial gain.

ANY ATHLETE WITH A SUSPECTED CONCUSSION SHOULD BE IMMEDIATELY REMOVED FROM PRACTICE OR PLAY AND SHOULD NOT RETURN TO ACTIVITY UNTIL ASSESSED MEDICALLY, EVEN IF THE SYMPTOMS RESOLVE
